

Talaan E-Invoicing System: Admin and Office Manual

Sep 27, 2026 · @Arnold

Talaan issues BIR-compliant electronic invoices, credit memos and Collection Receipts, applies statutory and sale discounts, tracks collections and stock, and lets anyone verify a document by QR code, in line with RR 7-2024, RMC 77-2024 and RMC 98-2026.

Getting started

Open the prototype at claude.ai/artifact/14W8WxtZkM2jcAFiBijhTH in any browser, on a computer or phone. It runs on sample data for Bizmaker Consultancy Inc. (head office, TIN 010-386-422-00000, RDO 051 Pasay City) Nothing is sent to the BIR or to buyers, and entries reset when the page reloads.

The screen. The menu sits on the left (on a phone, across the top). The main work area is on the right. A number beside a menu item flags items needing action, such as invoices not yet sent to buyers or credit memos awaiting approval.

Signing in. Each user signs in with their own account, and what they can do depends on their role. See *Signing in, roles and security* below.

Menu at a glance.

Menu item	Use it to
Invoices	See all e-invoices, their delivery, collection and reporting status
New invoice	Issue an e-invoice, in pesos or foreign currency
Small sales tally	Tally non-VAT sales below ₱500
Discount register	Review sales with statutory discounts
Credit memos	Prepare, approve and view credit memos
Correction notices	Prepare, approve and view corrections of buyer details
Receipts register	Issue Collection Receipts for advances and collections
Customers	Maintain the buyer database

Menu item	Use it to
Products and stock	Maintain SKUs, branch prices and discount coverage; stock in and out, transfers
Verify a document	Check a scanned QR code or verification link
RMC 98-2026 readiness	Check compliance status and the built-in rules
EIS transmission log	Review transmissions, once sales reporting applies
Company, PTI and permits	Set PTI, certification and reporting settings
Foreign currency	Enter exchange rates; review the foreign-currency summary and realized forex gains and losses
Branches	View and add branches, their series, and branch totals
Users and security	Manage users, roles, branches and limits; review the security log
Invoice design	View the current design and request changes
Provider console	For the EIS provider only (PIN-protected): design changes and new discount rules

Signing in, roles and security

Every user has their own account; their role decides what they can do, and every sign-in, denied action, approval and settings change is logged.

Signing in.

1. Enter your username and password, then click **Sign in**.
2. Approvers, administrators and auditors then enter the 6-digit code from their authenticator app. (The prototype shows the code on screen.)
3. New users, and users whose password was reset, sign in with the temporary password and must set a new one: at least 10 characters, with upper and lower case, a number and a symbol.

After 5 wrong passwords the account locks for 15 minutes; the administrator can unlock it sooner. You are signed out automatically after 15 minutes without activity. Click **Sign out** under your name when you leave the workstation.

Roles.

Role	Can	Cannot
Cashier (counter only)	Issue invoices at the cashier counter, apply statutory discounts with the buyer's ID, reprint and send own invoices, send requests to a supervisor	Open the full system; change prices, promotions or rates; approve, void or correct
Cashier or billing clerk	Issue invoices and Collection Receipts; prepare credit memos, correction notices and adjustments; add customers; use the counter	Approve; edit items or stock; change settings
Accountant or bookkeeper	The above, plus customers, items and stock	Approve; change settings
Approver	The above, plus approve documents up to a peso limit and set store promotions	Approve own documents, or above the limit
Company administrator	Users, settings, branches, design requests, item master and promotions; issue invoices and prepare documents in the full system or at the counter	Approve documents
Auditor	View everything, including the security log	Change anything

No one can approve a document they prepared, and no one can edit or delete an issued document.

Cashier counter. Cashier accounts open straight into the counter, where they type directly on the invoice form. Every other role that can issue invoices, including the administrator, can click **Switch to cashier counter** under their name, and **Switch to full system** to return. Each invoice records who issued it.

Give cashiers the separate [Talaan Counter: Cashier Guide](#); this manual covers the office side.

Limits set per user.

- **Approval limit.** An approver can only approve credit memos and stock adjustments up to their peso limit; larger ones need a higher approver.

- **Sale discount cap.** A user cannot issue an invoice whose sale and line discounts exceed their cap, for example 10% for a cashier. Statutory discounts are not capped.
- **Branch.** Each user is assigned to a branch.

Managing users (administrator). Open **Users and security**:

- **Add user.** Enter name, position, username, role, branch, approval limit and discount cap. Two-factor sign-in is always required for approvers, administrators and auditors.
- **Edit, Deactivate or Reactivate** a user; deactivate departing staff on their last day.
- **Reset password.** The user must set a new one at next sign-in.
- **Unlock** a locked account.
- **Record access review.** Review all users and their roles each quarter, then record it.

Security log. The same page lists sign-ins, failed attempts, lockouts, sign-outs and timeouts, denied actions, approvals, issued invoices, and changes to users and settings. Entries cannot be edited or deleted. Administrators and auditors can view it.

Storage. The top of **Users and security** shows storage used against the client's plan, broken down into documents, customers and items, attachments (2303 uploads, logos) and logs. The administrator is alerted at 80%, 90% and 100% by a banner on every page, an email and a log entry. Invoicing is never blocked by storage; upgrade the plan or archive old attachments instead.

Philippine Standard Time. All dates and times, including today's date for issuing, run on Philippine Standard Time (Asia/Manila), whatever the computer's own time zone. The current Philippine time shows under your name.

The prototype simulates these controls in the browser. In the production system they run on the server, with passwords stored only in protected form, a real authenticator app or passkey, encryption, and each client's data kept separate.

Issuing an e-invoice

An invoice is issued for every sale on the date of transaction; once issued, it is locked and can never be edited or deleted.

1. Click **New invoice**. The invoice number is assigned automatically from the approved series.
2. Under **Sale**, choose:
 - Cash sales or charge sales.
 - Goods or services.
 - The date of transaction. It defaults to today and cannot be a future date.

3. Under **Sold to**, type part of the buyer's name or at least 3 digits of the TIN. Pick the buyer from the list, or press Enter. The registered name, tax status, TIN, address and email fill in.
 - Not in the list? Choose **Add new customer** and complete the form. The buyer is saved for next time.
4. Under **Item description or nature of service**, type the SKU, barcode or item name in the **Item (SKU)** column. Description, unit, price and tax treatment fill in, and the quantity on hand shows below.
 - Adjust the quantity, price, tax treatment or line discount if needed.
 - Tick **Unit prices already include VAT** if your prices are VAT-inclusive.
 - Use **Add item** for more lines.
5. Under **Discounts and withholding**, set any sale discount, any statutory discount (see Discounts on an invoice), and the withholding tax rate the buyer will deduct.
6. If the buyer has paid an advance, the **Advance payments from this buyer** panel appears. Tick the Collection Receipt to apply.
7. Check the **Summary** on the right. It shows the invoice format the system chose (B1 to B5 of RMC 77-2024) and the full computation down to Total amount due.
8. Check **Before issuing**. Every item must show a green check. Lines marked "i" are guidance, such as the ₱1,000 rule or low stock.
9. Click **Preview printed invoice** if you want to see the form, then click **Issue e-invoice**.

Picking items. Type a SKU or name in the SKU field, or open **List ▼** under it to choose from Services or Products. Products show the stock on hand at the invoice's branch. The description, price and tax treatment fill in from the item master, and any running store promotion applies.

How the format is chosen.

Sale	Format
VAT seller, any VATable item	B1 VAT invoice
VAT seller, all items VAT-exempt	B3, marked "VAT-EXEMPT SALE"
VAT seller, all items zero-rated	B4, marked "ZERO-RATED SALE"
Non-VAT seller	B2 non-VAT invoice
Non-VAT seller with exempt items	B5 mixed sales

The ₱1,000 rule. For a VAT sale of ₱1,000 or more to a VAT-registered buyer, the system will not issue the invoice until the buyer's TIN and address are complete.

Using the cashier counter (office users)

Administrators, approvers, bookkeepers and billing clerks can issue sales at the counter as well as in the full system.

1. Click **Switch to cashier counter** under your name. Users assigned to all branches choose the branch in the counter's top bar.
2. Encode the sale on the invoice form as described in the Cashier Guide: buyer, items (scan, type or **List ▼**), quantity, cash or charge, currency, statutory discount.
3. Issue, then print, email or record the QR scan.
4. Click **Switch to full system** to return.

Date of transaction. Unlike cashiers, office users can pick an earlier date at the counter. A reason is required; it prints in the invoice's remarks and goes to the security log. Future dates are never allowed.

Requests from cashiers. When a cashier uses **Ask supervisor** or **Request correction or void**, the request appears at the top of **Invoices** for approvers and administrators. Act on it (a credit memo, correction notice or new invoice as needed), then click **Mark handled**.

Withholding, payment details and unpaid invoices

Withholding by the buyer. Under **Discounts and withholding**, choose a preset rate (1%, 2%, 5%, 10%, 15%), **Other rate (%)** to type any rate, or **Fixed amount (P)** to type the exact amount the client will withhold. "Less: Withholding Tax" and the total amount due recompute at once; a fixed amount can't exceed the sale net of VAT.

Save a client's usual rate in its customer record (**Withholds tax on our invoices**, with a note such as "top withholding agent"). It then fills in automatically when the client is picked, in the full editor and at the counter.

Payment details (cash sales). Choose how the buyer paid: cash, check, e-wallet, bank transfer, or credit or debit card, then enter the bank or provider and the reference or check number (and check or transfer date). A reference is required for non-cash methods. It prints on the invoice under **Payment**, for example "Check No. 0012345, BDO".

Charge sales print as unpaid. A charge-sale invoice carries the notice "UNPAID AT ISSUANCE. Payment will be acknowledged by a Collection Receipt." The invoice is never changed afterwards; when the client pays, issue a Collection Receipt with **Record payment**, and the invoice's collection status updates on screen.

Payment terms and due dates. Each client has default terms in its customer record: due on receipt, Net 7, 15, 30, 45 or 60 days. On a charge sale the terms fill in and can be changed, or a specific due date picked. The unpaid notice on the invoice prints the terms

and due date, for example "Terms: Net 45 days; due date November 14, 2026". Unpaid invoices past their due date show **Overdue N days** in the Invoices list and in the invoice's collection panel.

Receivables aging. The **Receivables aging** page lists unpaid charge-sale balances by client in pesos, net of credit memos and collections, sorted as not yet due, 1–30, 31–60, 61–90 and over 90 days past due. Choose the "as of" date, click a client to see its invoices, or **Download CSV**. It follows the branch selector.

Withholding at the counter. The counter's **Withholding by buyer** box uses the client's record by default, or a preset rate, another rate or a fixed amount. Office users may enter it freely; cashiers only for a named client and with a reason (e.g. "client will issue BIR Form 2307"). Every manual entry is logged and totalled on the cashier's shift summary.

VAT class on each line

Every invoice line prints its VAT class next to the SKU (VATable, VAT-exempt or zero-rated; for non-VAT sellers, exempt or subject to percentage tax), and the buyer's email prints in the SOLD TO box when there is one.

Changing a line's class. The class comes from the item master. In the full editor it can be changed per line. At the counter, click **Change VAT class** on the line, choose the new class and reason (e.g. sale to a PEZA- or BOI-registered enterprise; service to a nonresident paid in foreign currency; exempt under Sec. 109 or a special law), and for zero-rated or exempt enter the supporting document. Cashiers need an approver to choose their name and type their password. The line prints the new class, reason and document, and the change goes to the security log and the structured data.

Senior citizen and PWD split (restaurant-type items). The cashier does not reclassify these. Choosing Senior citizen or PWD makes the covered portion VAT-exempt with the 20% discount, tied to the ID:

- **Shared meal:** enter the total diners and how many are SC/PWD; the line reads, for example, "Split: 1 of 4 shares VAT-exempt (SC), rest VATable".
- **Separate orders:** encode the beneficiary's order on its own line and untick **This order is for the SC** on the others.

Four ₱450 lunches with one senior give VATable sales ₱1,350.00, VAT ₱162.00, VAT-exempt sales ₱450.00, SC discount ₱90.00, and ₱1,872.00 due either way.

Discounts on an invoice

An invoice can carry a store sale discount and one statutory discount; on every line the system applies whichever gives the buyer more, never both.

Sale or promotional discount. Under **Discounts and withholding**, enter the name of the sale (for example "Anniversary Sale"), choose a percentage or a fixed peso amount, and enter the value. It applies to the whole invoice, spread over the lines in proportion. It prints as its own line under the items, and VAT is computed on the discounted amount. For a discount on one item only, use that line's discount field.

Store promotions. A promotion set under **Products and stock > Store promotions** (for example, the 15% early-bird seminar rate) applies automatically to its items, at the counter and in the full editor, without being typed. It does not count against the user's own discount cap. A sale discount typed on an invoice replaces the store promotion on that invoice.

Statutory discounts. Choose the beneficiary type under **Statutory discount**, then enter the ID number and the beneficiary's name.

Type	Discount	VAT	Also required
Senior citizen (RA 9994), PWD (RA 10754)	20% on qualified goods and services; 5% on basic necessities and prime commodities	20% lines VAT-exempt; 5% lines VAT still due	Buyer's signature
National athlete or coach (RA 10699, RR 13-2020)	20% of the VAT-exclusive price	VAT still due on the full price	Confirm PNSTM ID and booklet; NSA endorsement for sports equipment
Medal of Valor awardee or dependent (RA 9049)	20%	VAT still due	Awardee, widow or widower, or dependent
Solo parent (RA 11861, RR 1-2023)	10% on baby's milk, supplements, diapers and prescribed medicines for a child aged 6 or under	VAT-exempt	Child's name; confirm income below ₱250,000
Added rules ("Others")	As set by the provider	As set by the provider	As set by the provider

Line-by-line comparison. Once a type is chosen, a table appears under it. For each line it shows:

- the coverage, which comes from the item master and can be changed per line;

- the statutory benefit, including any VAT removed;
- the sale or line discount;
- which one was applied.

The printed invoice notes on each line which discount was used.

Limits the system enforces.

- The 5% discount on basic necessities is capped at ₱125 per calendar week per ID (Monday to Sunday), tracked across invoices (JAO 24-02).
- Group meals: enter the total diners and how many are beneficiaries. Only their share of the covered lines is discounted.
- Only one statutory type per invoice. A buyer holding two IDs chooses one.
- The invoice cannot be issued until the ID, name and any required confirmation are complete.

Always confirm the purchase is for the beneficiary's own use, and have the invoice signed.

Discount register

The **Discount register** keeps the separate record of discounted sales that the regulations require to support the discounts claimed as deductions (for example, RR 13-2020 and RR 1-2023).

It lists every invoice with a statutory discount: date, invoice number, type, beneficiary's name, ID number, gross sales, VAT-exempt sales and discount granted. Totals by type appear at the top; filter by type using the buttons above the table. Invoices later reduced by a credit memo are flagged.

Click any row to open the invoice. Review the register monthly with your accountant before filing.

Sending the invoice to the buyer

An invoice counts as an electronic invoice only once it is transmitted to the buyer electronically (RMC 98-2026, IV.4b), so send every invoice right after issuing it.

Open the invoice from **Invoices**. In the **Send to buyer** panel, use any of these:

- **Email e-invoice.** The buyer's email fills in from the customer record.
- **Copy online view link.** Paste it in a message to the buyer.
- **Buyer scanned QR code.** Use when the buyer scans the QR code printed on the invoice.

Each delivery is logged with the date and time. The **E-invoice validity** panel turns green once the invoice has been sent.

Printed copies. Click **Print copy for buyer** when the buyer asks for paper, or for walk-in (B2C) sales where electronic delivery isn't practical. Only the invoice form prints.

Verifying a document by QR code

Automatic email. With **Company, PTI and permits > Delivery to buyers** ticked (the default), every invoice is emailed to the buyer the moment it is issued, if the buyer has an email on file. To exclude a client, untick **Send e-invoices automatically** in its customer record. Each automatic email is logged on the invoice as "Email (automatic)".

Every invoice and credit memo carries a digitally signed QR code; scanning it opens a verification page that shows whether the document is authentic and still valid.

What the page shows.

- **Authenticity.** "Authentic" in green when the digital signature matches, or "Not authentic or altered" in red when the amounts presented differ from what was issued.
- **Key details.** Seller and TIN, document number, date, total, VAT, PTI number and EIS unique ID.
- **Status.** Valid; adjusted by a credit memo or additional invoice; or cancelled and replaced.

Privacy. The public page withholds the buyer's name, TIN and line items. An authorized examiner signs in to see the full document, and each such view is recorded in the document's access log.

How to use it.

1. Click the QR code on any invoice or credit memo, or open **Verify a document** and paste a link from a scanned code.
2. Read the result at the top of the page.
3. To show a buyer or examiner how tampering is caught, click **Try an altered copy**. The total is raised by ₱1,000 and the check fails.

This is the seller's verification service. RMC 98-2026 (IV.14) leaves the official method of verification to the BIR; the EIS unique ID lets examiners match the document to BIR data once sales reporting starts.

Collections and advance payments

Every payment received is covered by a Collection Receipt; the invoice is never issued upon receipt of payment (RMC 77-2024 Q15, Q31).

Payment after the sale (charge sales).

1. Open the invoice and click **Record payment** in the **Collection** panel. Or go to **Receipts register** and click **Record receipt**.
2. Choose **Collection after the sale or service**.
3. Tick the invoices being paid and adjust the amounts if the payment is partial. One receipt can cover several invoices.
4. Choose cash or credit card and enter the account number if any.
5. Click **Issue collection receipt**.

Advance payment before the sale.

1. In **Receipts register**, click **Record receipt** and choose the payer.
2. Choose **Advance payment before the sale or service**. Describe what the advance is for and enter the amount.
3. Click **Issue collection receipt**. The advance stays in the register as "not yet invoiced."
4. When the goods are delivered or the service is rendered, open that receipt and click **Issue invoice from this advance**. The advance is already applied. Enter the items and prices, then issue.

The invoice shows the full sale and cites the Collection Receipt as proof of payment: in its remarks, and in the "Received the amount of" box on B1 and B2 formats. Collect any balance with **Record payment**.

Don't leave advances uninvoiced. A receipt without the invoice counts as failure to issue an invoice (RMC 77-2024 Q27). Use the filter **Advances not yet invoiced** in the register to find them.

Tracing. Each Collection Receipt lists the invoices it was applied to. Each invoice's **Collection** panel lists every receipt behind it, marked as advance or collection, and the balance.

Corrections: credit memos, additional billing, cancel and reissue

An issued invoice is never changed; a decrease goes through a credit memo and an increase through a new invoice, both referencing the original (RMC 98-2026, IV.8).

What happened	Use	Where
Goods returned, allowance, discount after sale, overbilling	Issue credit memo	Invoice > Adjustments
Amount billed was too low	Bill additional amount	Invoice > Adjustments
Wrong buyer address, or wrong name or TIN of a non-VAT or B2C buyer	Correct buyer details (Correction Notice)	Invoice > Adjustments
Wrong name or TIN of a VAT-registered buyer on a VAT invoice, wrong buyer, or other errors	Cancel and reissue	Invoice > Adjustments

Preparing a credit memo.

1. Open the invoice and click **Issue credit memo**.
2. Choose the reason and add details, such as the return date.
3. Enter the amount to credit on each line. For **Return of goods**, enter the quantity returned instead; the amount computes itself and the stock goes back in.
4. Check **Before submitting**, then click **Submit for approval**. No credit memo number is assigned yet.

Approving it. The request appears under **Credit memos** with a count in the menu. An approver who did not prepare it opens it, reviews the draft, then clicks **Approve and issue** or **Decline** (a reason is required). On approval the memo gets its number and prints the preparer, approver and PTI number.

Sending it to the buyer. On the credit memo, use **Email credit memo** or **Copy online view link**. For a printed copy the buyer signs, click **Buyer signed printed copy**. A VAT-registered buyer needs the memo to reduce its input VAT.

Cancel and reissue. This creates a full credit memo for approval. Once approved, the corrected replacement invoice opens with the original details filled in; fix what was wrong and issue it. It prints a remark naming the cancelled invoice and the credit memo.

Correcting buyer details: Correction Notices

A typographical error in the buyer's name, TIN or address is corrected by a separate, approved Correction Notice; the issued invoice itself is never edited (RMC 98-2026, IV.8).

What can be corrected.

Field	Correction Notice allowed?
Buyer's business address	Yes, for any invoice
Buyer's registered name or TIN	Yes, for non-VAT or B2C buyers, or on a non-VAT invoice
Buyer's registered name or TIN, VAT-registered buyer on a VAT invoice	No. Use Cancel and reissue , because the buyer's input VAT depends on the name and TIN printed on the invoice itself (RR 7-2024)
Amounts, items, quantities, prices, VAT, dates, seller details	Never

Preparing a notice.

1. Open the invoice and click **Correct buyer details** in the Adjustments panel.
2. Tick each field to correct and type the corrected value. Fields not allowed for that invoice are locked.
3. Choose the reason and identify the supporting document, such as the buyer's BIR Form 2303. Tick that it was seen and a copy kept.
4. Leave **Also update the customer record on approval** ticked, so future documents are correct.
5. Check the preview and **Before submitting**, then click **Submit for approval**.

Approving it. The request appears under **Correction notices** with a count in the menu. An approver who did not prepare it compares the corrected values with the supporting document, then clicks **Approve and issue** or **Decline** (a reason is required). On approval the notice gets its number from its own series, is digitally signed and carries its own QR code.

After issue.

- Send the notice to the buyer by email, or have the buyer sign a printed copy.
- The invoice still shows exactly as issued, with a banner naming the notice and the corrected value.
- The invoice's verification page states that buyer details were corrected; the authorized view shows the invoice and the notice together.
- Credit memos issued afterwards carry the corrected buyer details.

No BIR format exists yet for correction notices, and the BIR's rules on sales adjustments are still to be issued. Until then, use notices mainly for address errors and for non-VAT or B2C buyers.

Products and stock

Set up each product once as a SKU; every stock movement is then taken from its source document, so the stock records always agree with the invoices.

Adding an item. In **Products and stock > Items**, click **Add item**. Enter the SKU, barcode (optional), description as it should print on the invoice, unit of measure, selling price net of VAT, default tax treatment, type (goods or service), reorder level, and which statutory discounts the item qualifies for (SC/PWD 20% or 5% BNPC, NAAC, MOV, solo parent, and any added rule). New goods items can carry an opening quantity and unit cost. Duplicate SKUs and barcodes are refused.

Recording movements. Go to **Products and stock > Stock in and out**.

Movement	How it is recorded	Approval
Purchase received	Receive a purchase: supplier, TIN, supplier's invoice no., items, quantity and unit cost	Posted at once
Return to supplier	Return to supplier: supplier, debit memo or return slip no., items and quantity	Posted at once; cannot exceed stock
Count variance, damage, loss, expiry	Stock adjustment: increase or decrease, reason, items and quantity	Needs an approver other than the preparer
Sale	Automatic when an invoice is issued	Not needed
Customer return	Credit memo, reason "Return of goods"	Credit memo approval
Cancelled invoice	Credit memo, reason "Cancellation of invoice"	Credit memo approval

Allowance, discount and overbilling credit memos change the peso amount only; stock does not move.

Checking stock. Click any SKU to open its **stock card**: each movement with its source document, running balance and weighted average cost. The **Inventory reconciliation** tab shows, per SKU, beginning + purchases – returns to suppliers – sales + customer returns ± adjustments = ending, valued at average cost. Items at or below the reorder level are shown in red.

Selling beyond stock. The invoice warns you but does not block the sale. Check for deliveries not yet recorded.

Store promotions. Approvers and administrators open **Products and stock > Store promotions**, click **Add promotion**, and enter the name that prints on the invoice, the rate, the dates, the items and the branch. Running, scheduled and ended promotions are listed; click **End** to stop one early. Every change goes to the security log.

Item lists in stock documents. In receiving reports, returns, adjustments and transfers, each line has a **List ▼** of products with their stock on hand, besides typing the SKU.

Categories and filters. Each item has a category (e.g. Seminars, E-learning, Advisory and compliance, Publications, Merchandise). The Products page filters by category and by status (services, products, at or below reorder level, inactive), shows 20 items per page, and the **List ▼** dropdowns group items by category.

Importing items from a CSV file.

1. Click **Import from CSV**, then **Download template**.
2. Fill one row per item: sku, barcode, description, category, unit, selling_price, tax_treatment (VATable, Exempt or Zero-rated), type (Goods or Service), reorder_level, and for new goods an optional opening_qty and opening_unit_cost.
3. Click **Choose CSV file**. The preview marks each row **New**, **Update** (existing SKU; stock is not changed) or **Error** with the reason.
4. Click **Import** to bring in the valid rows. Fix the error rows and import them later. Every import is logged.

Branch prices. When editing an item, you can enter a different selling price for each branch. Leave a branch blank to use the company price. The invoice fills in the price of the issuing branch.

Transfers between branches. Under **Stock in and out**, click **Transfer to another branch**, choose the receiving branch and enter the items and quantities.

1. On sending, the goods leave the sending branch's stock at average cost and show as **In transit**.
2. The receiving branch sees a banner on **Products and stock**. A user there, other than the sender, opens the transfer, enters the quantities actually received and a note on any shortage, then clicks **Confirm receipt**.
3. Received goods enter the receiving branch's stock. Any shortage is flagged "Received short" and is out of both branches' stock until settled by a carrier claim or a stock adjustment.

Branches

The head office and every branch issue e-invoices under the same PTI Electronic Invoice number, each with its own TIN branch code, registered address and numbering series (RMC 98-2026, IV.10 and IV.13).

The Branches page lists each branch's code, TIN, registered address, RDO, PTI coverage and series with the next number, plus totals per branch and a consolidated row. The administrator adds a branch with **Add branch**: code, name, registered address, RDO, the date the BIR was notified, and a series block start. Series that overlap another branch are refused.

What stays separate per branch.

- Numbering for invoices, credit memos, Collection Receipts and correction notices.
- The TIN with branch code and the address printed on every document, in the structured data and in the signed QR code.
- Stock on hand, stock cards and the inventory reconciliation.
- The small sales tally.

Credit memos, correction notices, additional billing, replacement invoices and collections always follow the original invoice's branch and series.

Which branch you work in.

- Users assigned to one branch see and issue only that branch's documents. Opening another branch's document is refused and logged.
- Users assigned to all branches choose a branch in the **Branch** box under their name. "All branches" gives a consolidated view for review; choose a specific branch before issuing anything.

Customers and items are shared by all branches. Readiness shows any branch whose BIR notice has not been recorded.

Foreign currency

Invoices can be issued in foreign currency; the system keeps the peso equivalent of every amount at the spot rate of the transaction date, using the BAP rate for US dollars and the BSP rate for other currencies, never a monthly average (RMC 12-2024).

Entering exchange rates. Each business day, a bookkeeper or approver opens **Foreign currency > Exchange rates**, clicks **Enter a rate**, and records the pesos per unit for each currency used. The source is set automatically. Only one rate is allowed per currency per day.

Issuing a foreign-currency invoice.

1. On **New invoice**, choose the currency under **Sale**. The rate for the date of transaction, or the latest earlier published rate, appears beside it.
2. Enter prices in that currency. The summary shows the totals in the currency and their peso equivalents.
3. Issue as usual. The rate is frozen with the invoice. The printed invoice shows the currency in the column headings and, below the items, the peso equivalent of total sales, VAT and amount due, with the rate, source and date.

The invoice cannot be issued without a rate on file for its date. Peso thresholds, such as the ₱1,000 buyer-TIN rule, are tested on the peso equivalent. Statutory discounts apply to peso sales only.

Credit memos on a foreign-currency invoice use the invoice's own rate.

Collecting. Use **Record payment** on the invoice, or **Record receipt** with the currency set. The Collection Receipt uses the rate on the collection date and prints its peso equivalent. The difference from the invoice's rate is recorded as a realized forex gain or loss. One receipt can cover several invoices in the same currency. Advance payments are in pesos only.

Reports. **Transactions summary** lists every foreign-currency invoice, credit memo and collection with date, nature, amount, rate, source and peso amount, the summary kept for BIR audit. **Realized forex gains and losses** lists each collection's gain or loss; only these realized amounts count for income tax.

Foreign buyers

A buyer based abroad usually has no Philippine TIN; tag it as **Foreign buyer (no Philippine TIN)** and record its country instead.

1. In **Customers**, or from **Add new customer** on an invoice, choose the tax status **Foreign buyer**.
2. Enter the registered name, address and **country** (both required). Add the buyer's **foreign tax ID** (e.g. a US EIN or Singapore UEN) if you have it.
3. Issue invoices as usual, in pesos or foreign currency.

Documents print the TIN line as "None (foreign buyer, *country*)", with the foreign tax ID if recorded. The ₱1,000 buyer-TIN rule does not apply, since it covers VAT-registered buyers in the Philippines.

Zero-rated sales to foreign buyers. The invoice shows a reminder to keep the evidence that supports zero rating: for services, proof that the fee was paid in acceptable foreign currency and accounted for under BSP rules (Tax Code Sec. 108(B)(2)); for exported goods, the export documents and proof of foreign-currency payment (Sec. 106(A)(2)). A zero-rated sale invoiced in pesos also gets a warning to confirm payment will come in foreign currency.

Small sales tally and system downtime

Small sales tally (non-VAT sellers only). A non-VAT seller must issue an invoice for sales of ₱500 or more, on the buyer's request, or once the day's smaller sales reach ₱500 (RMC 77-2024 Q2-Q3). VAT sellers invoice every sale and do not use the tally.

1. Open **Small sales tally**. Record each sale below ₱500 that the buyer did not ask an invoice for: what was sold, amount and tax treatment.
2. Watch the running total. When it reaches ₱500, a banner appears. Click **Issue aggregate invoice**, review it and issue it. It is issued to "Various walk-in customers" and covers all the day's untallied sales.
3. At day's end, click **Close the day**. It is refused while an aggregate invoice is still due. If the total stayed below ₱500, the day closes with no invoice required.

If a buyer asks for an invoice, issue one through **New invoice**, whatever the amount.

System downtime (RMC 98-2026, IV.11). When the system or internet is down, issue a BIR-authorized manual invoice from your backup booklet. Once the system is back:

1. Click **New invoice** and tick **This replaces a manual invoice issued during system downtime**.
2. Enter the manual invoice number and date, and the same sale details.
3. Issue it. The e-invoice prints a remark naming the manual invoice it replaces.

Customers, settings and design changes

Customers. In **Customers**, search by name or TIN, click **Add customer**, or **Edit** a record. Tag each buyer as VAT-registered, non-VAT registered, individual/end consumer (B2C), or foreign buyer. Philippine business buyers need a TIN; B2C buyers do not; foreign buyers need a country instead (see Foreign buyers). Edits apply to future documents only; issued documents keep the buyer details printed on them.

Client information form (customer portal). The top of **Customers** shows a link and QR code to send to new clients. They open it without signing in, enter their registered name, TIN or country, address, email, contact person and whether they withhold tax, upload their BIR Form 2303, and consent under the Data Privacy Act. Submissions wait under

Waiting for review: compare them with the 2303, then click **Approve** to create the customer or **Reject**. A TIN already on file is refused, so the existing record is updated instead.

Many customers. The customer list shows 20 per page; search by name or TIN.

Company, PTI and permits. Here the client records:

- PTI Electronic Invoice number, date, approved system and branch. Issuing is blocked until a PTI is on file.
- **EIS Certification obtained**, with its date. Until it is ticked, the invoice list shows the deadline: 6 months from the PTI date.
- **Electronic sales reporting required.** Leave it off until the BIR issues sales-reporting guidelines and the Permit to Transmit is secured.
- Numbering series for invoices, credit memos and Collection Receipts, and the authorized manual booklet for downtime.

Seller details (registered name, trade name, TIN, address) are locked; changes go through the provider.

Invoice design. The client views its current design version and history here, but cannot change the logo, colors or fonts. To change them, click **Request a design change**, tick what should change, describe it, attach a new logo if any, and submit. The provider then:

1. Reviews the request in the **Provider console** (PIN-protected; demo PIN 2468).
2. Records the BIR update: an amended PTI or an acknowledged notice to the RDO/LT Office. Activation is blocked until this is entered.
3. Configures and activates the new design version, with a live preview.

New documents use the new design; issued documents keep the design they were issued with. Every step is logged in the audit trail.

New mandatory discounts ("Others")

When a new law or regulation creates a mandatory discount, the EIS provider adds it as a rule in the **Provider console**; clients send the issuance to after-sales support.

The provider enters:

- name, short code (2 to 6 letters) and legal basis;
- effective date and, if any, expiry date;
- rate, and whether the sale is VAT-exempt (VAT removed first) or VAT is still due;
- the ID the beneficiary presents, any extra detail to record, and any confirmation the cashier must tick;

- optional caps (weekly per ID, per transaction) and whether group meals are prorated.

Once activated, the rule appears in the invoice's statutory discount list marked "[added rule]", and each item gets a checkbox for it. It follows the same line-by-line comparison, printing, discount register and readiness listing as the built-in discounts.

Rules cannot be edited after creation, so issued invoices stay as computed. To change a rule, the provider deactivates it and adds a new one. Every addition and deactivation is logged.

Checking compliance: the readiness page

Open **RMC 98-2026 readiness** to see, at a glance, where the company stands against the e-invoicing mandate and which invoicing rules the system applies.

Part 1: RMC 98-2026 checklist. Each item shows a green check, a warning or a dash, with the section of the Circular:

- PTI Electronic Invoice secured (IV.12)
- EIS Certification within 6 months of the PTI (IV.15)
- Invoices sent to buyers electronically (IV.4b), listing any not yet sent
- Printed copies on request, no alteration of issued invoices, and the downtime procedure (IV.4, IV.7, IV.8, IV.11)
- Structured JSON data, branch coverage, and sales reporting status (IV.2, IV.6, IV.10, IV.15)
- Days left to the December 31, 2026 deadline (IV.1)

Part 2: Invoicing rules built into the system. Scroll down for the rules from the Tax Code, RR 7-2024 and RMC 77-2024. Each is tagged:

Tag	Meaning
Enforced	The system will not proceed until the rule is met
Checked	The system flags a problem but lets you decide
Guidance	A reminder shown at the right moment

Review this page weekly until the deadline, and whenever settings change.

Getting help

Click **Help** at the bottom right of any screen, in the full system or at the counter.

- **Help assistant.** Type a question such as "How do I record a check payment?" and click **Ask**. Answers come from Talaan's help articles.
- **Talk to support.** Send a message to AAA's IT support team. Your name, role, branch and current screen are attached automatically, and you get a reference number. Replies appear in the same thread.

AAA staff answer from the **Support inbox** in the Provider console. For price, discount or void questions at the counter, cashiers should use **Ask supervisor** instead.

Quick reference: messages and what to do

Message or sign	What it means	What to do
"Username or password is incorrect"	Wrong details; attempts are counted	Check the username and password; after 5 failures the account locks
"Account locked"	5 failed attempts in a row	Wait 15 minutes, or ask the administrator to unlock it
"Your role can't ..."	The action is outside your role	Ask a user with the right role; the attempt is logged
"... above your approval limit"	The document exceeds your peso limit	A higher approver must approve it
"Sale and line discounts ... within your limit" in red	Discount exceeds your cap	Reduce the discount or ask a user with a higher cap
Issue e-invoice button is greyed out	A check under Before issuing has a red "!"	Fix the item marked in red
"Sale of ₱1,000 or more to a VAT-registered buyer" in red	Buyer's TIN or address is incomplete	Click Update record on the buyer and complete it
"Buyer TIN, if any, in ###-###-#### format" in red	TIN is missing digits or the branch code	Correct the TIN in the customer record
"The sale discount is higher than the SC discount"	The store discount gives the buyer more on that line	Nothing; the higher discount is applied automatically
"BNPC 5% discount used by this ID this week"	Weekly ₱125 cap is being tracked	Nothing; the discount stops at the cap
Beneficiary name, ID or confirmation in red	Statutory discount details incomplete	Complete them from the beneficiary's ID

Message or sign	What it means	What to do
"Only X on hand" warning	Selling more than recorded stock	Check for unrecorded deliveries; record them under Receive a purchase
"Date of transaction is earlier than today"	Invoice is being issued late	Issue invoices on the date of the sale
"Not yet transmitted to the buyer electronically"	Invoice not yet sent	Use Email, link or QR in Send to buyer
Advance marked "not yet invoiced"	Payment received, no invoice yet	Issue the invoice once goods or services are delivered
"You prepared this request, so someone else must approve it"	Segregation of duties	Ask another approver
"Issue the aggregate invoice before closing the day"	Non-VAT small sales reached ₱500	Issue the aggregate invoice first
"Not authentic or altered" on the verification page	The copy's amounts differ from what was issued	Treat the copy as unreliable; ask the seller for the original
EIS Certification due banner	Certification not yet recorded	Complete the EIS tests; tick the setting when certified

Three rules to remember. Issue the invoice on the day of the sale. Send it to the buyer electronically. Never edit an issued invoice: use a credit memo or a new invoice.
